REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The examiner respectfully asserts that none of the prior art, taken either singly or in combination, is seen to teach or suggest the use of a wheeled carriage including an auxiliary wheel assembly (secured to the base thereof) which comprises the particular structural combination and configuration of a rotatable support shaft having an axis transverse to the length of the base, *a stop element (fixedly) mounted to the rotatable support shaft*, an auxiliary wheel support bracket having a first end rotatably secured to the same support shaft and a second end rotatably affixed to at least one auxiliary wheel, *and a stop formed on the support bracket*, wherein the auxiliary wheel contacts a supporting floor surface *when the stop is not engaged with the stop element* and the auxiliary wheel is spaced from the floor surface *when the bracket and stop element are rotated to bring the stop in engagement with the stop element*, as specifically recited in Applicants' independent claims 1 and 15. With regards to the prior art, conventional auxiliary wheel assemblies generally comprise a plurality of linking or cam elements pivotally joined together in series and maintained in a desired position by at least one biasing spring, as opposed to a stop and stop element connected along a common rotatable support shaft as specifically claimed by Applicants. Hence, it is considered that the application is currently in proper condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
